Day	Open Time	Close Time
Sunday	09:00	21:00

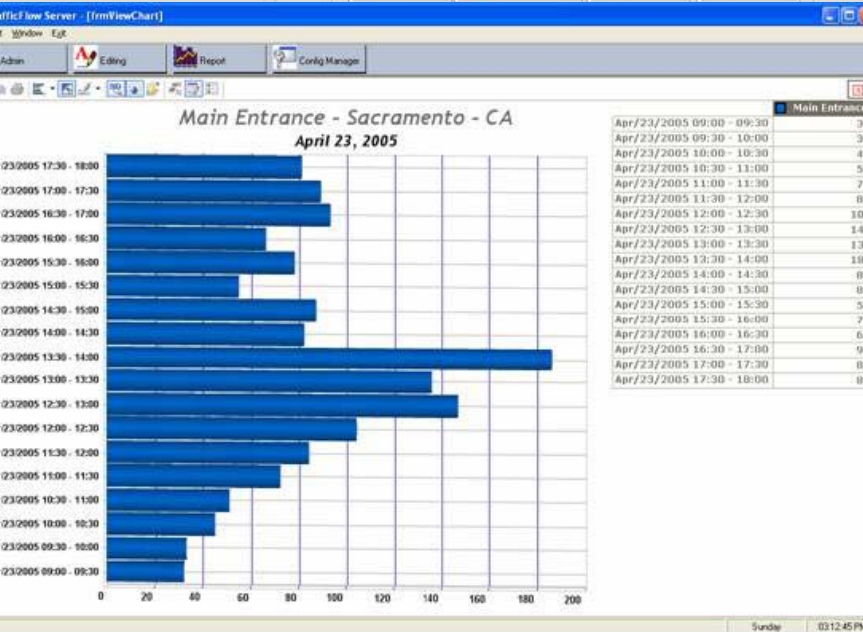

Limit reporting to these hours of operation

Buttons: Save, Edit Without Saving, Delete Count, Delete Store

CompuChart Software, powered by TrafficFlow Server provides user-friendly yet sophisticated administrative tools to automate the collection and reporting of traffic data from every wireless counter in every location. The basic features include:

- Data query and data editing tools with automated scheduling of report printing, emailing and exporting.
- User level Microsoft Access Database to store the count data until it is forwarded (if desired) to a central server over TCP/IP. This will also allow you to create your own custom queries and reports using the wizards and programming strength of Access.
- Flexible exporting tools for the integration of count data with POS, payroll, or other data bases.
- Complete data adjustment and re-calculation tools improve the raw count accuracy with actual visitor traffic. Correction factors can be applied to individual sensors to account for expected traffic from delivery and staff personnel.
- Use of CompuChart Software does not affect the ability to view the standard CompuCount screens on your PC or to download the CompuCount CSV data files to another software program.

TrafficFlow Server - [Data Import Settings - Time]
