

Management Information (Survey) Box

Wirelessly Transmit the Pushbutton Count

to your CompuCount PC Server

Part # 3005-132

This product offers instant feedback on a topic of the hour, day, week or month...or track the number and timing of specific questions or events. The Walker Wireless Management Information Box contains four pushbuttons that are connected to battery operated digital counters with a built-in radio to wirelessly transmit the pushbutton count data to a CompuCount server attached to your PC or PC network. At your PC, you can view, print and export the pushbutton count data in half hour, hourly, daily, weekly and monthly formats. You can easily assign and change an eight character description for each button at the CompuCount.

ACCESSORIES

COMPUCOUNT

Collects and stores count data from up to 16 counters. An ethernet connection to your computer permits viewing of the data from any standard web browser. Data is stored on a half-hour, hourly, daily, weekly, and monthly basis.

BOOSTACOUNT

Pre-configured repeater to transmit the count data through walls and floors to the CompuCount.
