

## Walker Wireless Temperature Monitor

Wirelessly monitor the temperature of your office, coolers, lounge areas, ball room, entry ways, and much, much more

Wireless Temperature Sensor

This package consists of one battery operated wireless temperature sensor, one receiver to be attached to your PC, and a software display package for one PC. The Walker Wireless Temperature Sensor is a battery operated digital temperature sensor with a built-in microprocessor controlled 418 MHz FCC certified radio transmitter.

The extremely small temperature sensor measures only 1.7" x 3.1" x 0.8" (including mounting flange), weighs only two ounces, and requires no wiring for installation. The temperature sensor has an on-board time of day clock that allows it to spend most of the time in a low power mode, leading to a battery life up to three years.

418 MHz Temperature Receiver

### Main Features

- Typical Battery life of 3 years. User replaceable battery.
- Integrated Mounting Flange for easy installation.
- Typical indoor radio range up to 200 feet.
- CRC-16 Error Checked Radio Data for accuracy.
- Our complete system costs less than just the electrical wiring for other systems.
- One Year Warranty
- View up to six temperature locations on your PC.

### Key Advantages

- Unique Serial Number for each temperature sensor to identify specific temperature locations.
- Temperature sensor still works – even when AC power is lost.
- -30 to 85 degree C Operating Temperature.
- Compatible with optional BoostAccount repeaters to extend the indoor radio range to 1500 feet and to transmit temperature data through walls and floors.
